-  Rivers and Streams
-  White Pine
-  Aspen
-  Lakes

**Stand 8 (20 acres) is a large sawlog size white pine stand with a red maple secondary type. The prescription will be to harvest the early successional species and thin the pine. Long-term objectives are to manage for pine.**

**Stand 9 (12 acres) is typed as an aspen stand. The basal area of the stand is equally divided between aspen, red maple and white pine. The harvest prescription will be coppice with standards to regenerate aspen.**

**Both stands were acquired by the state forest in 2015 and have no known history of forest management.**

**Both stands are also upland islands surrounded by wetlands. Harvesting operations will be restricted to well-frozen ground conditions only.**

**Biomass harvest is allowed.**
