RE: Site Investigation Report, Stresau  
Laboratory  
Spooner, Wisconsin  
WDNR BRRTS #02-66-584573  
SEH No. STRES 154873 14.00

Mr. John Sager, Hydrogeologist  
Wisconsin Department of Natural Resources  
1701 N 4<sup>th</sup> Street  
Superior, WI 54880

Dear Mr. Sager:

On behalf of Stresau Laboratory Inc. (Stresau), Short Elliott Hendrickson Inc. (SEH®) has prepared this Site Investigation (SI) Report documenting subsurface investigation activities conducted at the Stresau site near Spooner, Wisconsin in November and December 2020. The 2020 SI included subsurface investigation in the proximity of the and the facility's septic tanks and drain fields. The SI activities were conducted in general accordance with the Wisconsin Department of Natural Resources (WDNR) approved work plan for SI activities. Tables summarizing analytical results from the SI have previously been submitted to the WDNR on January 11, 2021.

We trust the information provided in this report meets your current requirements regarding the Stresau site. Please contact me at [bolson@sehinc.com](mailto:bolson@sehinc.com) or 715.271.7515 or Marc Makela, Stresau Compliance Specialist, at [mmakela@stresau.com](mailto:mmakela@stresau.com) or 715.635.2777 if you have any questions or comments regarding the site investigation.

Sincerely,

A handwritten signature in black ink that reads "Bruce K. Olson".

Bruce K. Olson, PE (IL, IN, WI)  
Principal

# Executive Summary

Short Elliott Hendrickson has completed a Site Investigation (SI) of the Stresau Laboratory (Stresau) facility located north of Spooner, Wisconsin. Stresau has operated on the site since 1961 and

The SI was performed on behalf of Stresau after the Wisconsin Department of Natural Resources (WDNR) required investigation of potential environmental impacts associated with the facility septic tank systems and drain fields and the located on the site. Field activities for the SI were conducted in November and December 2020, and included the installation of three new monitoring wells, drilling of twelve shallow hand auger borings, soil, groundwater, and septic waste sampling and analysis, and site survey activities. The SI results are provided in this report.

Soils at the site were found to be poorly graded sands with varying percentages of gravel (outwash deposits). Groundwater was found to flow to the east-northeast towards Dunn Lake. No visual or olfactory indications of soil or groundwater contamination were noted during the performance of the SI field activities.

Soil, groundwater, and septic waste samples collected from the Stresau site during this SI were analyzed for parameters approved by the WDNR, including volatile organic compounds (VOCs), polynuclear aromatic compounds (PAHs), total and TCLP RCRA metals,

The concentrations of these parameters identified in site media were compared to the appropriate state and/or federal regulatory criteria, if available.

The results of the SI indicate relatively low concentrations of several parameters were detected in the samples analyzed from the various site media. When compared to regulatory criteria, limited soils or groundwater exceedances were identified for three different parameters. No enforcement standards, maximum contaminant levels, or industrial residual contaminant levels were exceeded in any of the samples analyzed from the site.

Based on the results of the SI, SEH believes no further investigation or remediation is required and recommends continued groundwater monitoring for the site.

# Site Investigation Report

Stresau Laboratory

Prepared for Stresau Laboratory

## 1 | Introduction

This Site Investigation (SI) Report was prepared by Short Elliott Hendrickson Inc. (SEH®) on behalf of R. Stresau Laboratory, Inc. (Stresau) to document site investigation activities conducted at the site during November and December 2020. The Stresau property (hereafter referred to as “site”) has historically been used as a laboratory to

This report describes SI activities that have been completed at the site. The SI is specifically intended to assess historic potential releases to three septic systems located on the site and investigate potential contaminant releases at the [redacted]. The tasks performed during this SI were selected to assess the presence or absence of contamination in several media related to the historic site activities at these locations, and to identify potential receptors and environmental factors. The SI was conducted to address NR 716, Wis. Adm. Code requirements for site investigations, and was conducted in general accordance with a Wisconsin Department of Natural Resources (WDNR) approved NR 716 Work Plan. The Work Plan approval was granted after the following documents were written providing feedback and proposed changes to the original document:

- Site Investigation Work Plan (SEH, April 24, 2020),
- Site Investigation Work Plan Response Letter (WDNR, May 27, 2020),
- Response to WDNR Site Investigation Work Plan Review (SEH, June 26, 2020),
- Second Site Investigation Work Plan Response Letter (WDNR, August 20, 2020),
- Response to Second WDNR Work Plan Review (Stresau, October 12, 2020), and,
- Conditional Work Plan Approval (WDNR, October 14, 2020).

## 2 Background

The site is owned by Stresau and is located at N8265 Medley Road in Spooner, Wisconsin. The site is further described as being in the NE quarter of the SW quarter of Section 23, T40N, R13W in Washburn County, Wisconsin as shown in Figure 1, "Site Location" and Figure 2, "Site Features." The property is currently occupied by

Stresau has been producing

Groundwater monitoring has been performed in the proximity of the TTU since 1995, generally on an annual basis. Groundwater analytes have historically included volatile organic compounds (VOCs), polynuclear aromatic compounds (PAHs), and heavy metals. Four monitoring wells have been utilized in the groundwater monitoring program. Three of these wells (MW 1, MW 2, and MW 3) are in the proximity of the TTU. Well MW-8 is located along Dunn Lake Road near the southern boundary of the property and is a background well. The existing groundwater monitoring well locations are depicted on Figure 3, "Monitoring Well and Soil Sample Locations – North," and on Figure 4, "Monitoring Well and Soil Sample Locations - South."

In 2018, the WDNR conducted a hazardous waste Treatment, Storage, & Disposal Facility and Small Quantity Generator Inspection of the Stresau facility. During this inspection, the facility was alleged to be out of compliance with hazardous waste generation, treatment, storage, and disposal requirements. The alleged areas of noncompliance were documented in a July 17, 2019 Notice of Noncompliance (NON) from the WDNR. WDNR's concerns for the site included the potential release of contaminants to site septic systems from disposed mop water and potential contamination from fugitive ash associated with the TTU. These were further detailed as items 11, 21 and 23 in the NON and as item 3 in WDNR's Notice of Violation (NOV) dated November 7, 2019.

In conjunction with the NON and NOV, the WDNR issued Stresau a Responsible Party (RP) letter dated October 21, 2019. The RP letter summarized WDNR's concern over "two activities being conducted now and historically at R. Stresau Laboratory, Inc. (SLI) that have the potential to discharge hazardous substances to the environment". The first item of the WDNR's concern is the now-former, historical mop water that was generated from mopping production and non-production floor areas and depositing that mop water in a janitorial sink located in Building 8.<sup>1</sup> This sink discharges to the septic system connected to Building 8. As sampling of the mop water identified concentrations of barium, cadmium, chromium, and lead, WDNR is considering this mop water industrial wastewater and requested that Stresau complete a waste determination of

---

<sup>1</sup> In response to the WDNR's concern, Stresau ceased its historic mop water practice in January 2020, and in consultation with the WDNR, has installed and uses a "closed loop" water system to filter and reuse mop water. No more mop water is deposited in the janitorial sink and no mop water is allowed into any of the septic systems.

this water and investigate the potential of this wastewater impacting the environment via discharges to one or more of the three septic systems on site.

WDNR also identified a concern with the current

WDNR's RP letter stated that recent studies conducted by others on has shown air deposition of energetics impacting soil and groundwater. Due to the long-term operation of the TTU, WDNR suspected that hazardous substances associated with the operation of the TTU have been released through the air and deposited on the soil.

WDNR concluded that the now-former practice of discharging mop water to the septic system and the potential for air deposition of hazardous substances from OB/OD operations of the TTU indicates that Stresau may be responsible under Wis. Stats. Ch. 292 for the alleged discharge of a hazardous substance or other environmental pollution at the site. To address the WDNR's concerns, the RP letter specifically requested that the SI address the following:

1. Identify hazardous substances, past and present, used in the laboratory and work area that could potentially have been mixed in with mop or other water discharges to the three septic systems.
2. Conduct a waste determination of the water and sludge in the three septic systems for hazardous substances related to the current and historic operations at the facility.
3. Provide a description of where, when, and how long the septic systems have been used for disposal of mop and other waters generated at the facility.
4. Identify the company or companies historically pumping the septic tanks and describe how often the septic tanks were/are pumped and identify the location(s) where the water was/is disposed or land spread.
5. Conduct an evaluation of hazardous substances introduced and removed from the TTU, and any breakdown products from the operation of the TTU.
6. Site investigation sample collection, testing, and analysis should include all hazardous substances/contaminants of concern identified through the waste determination process, and identification of past and present hazardous substances used during facility operations.
7. Immediate or interim actions under Wis. Admin. Code ch. NR 708 may be necessary, especially relating to the septic system sludge based on results of assessment and investigation of the site.
8. Provide information regarding actions SLI has taken to prevent future hazardous substance discharges.

A Work Plan was submitted to WDNR by SEH on April 24, 2020 proposing Site Investigation activities designed to respond to WDNR's concerns. Following discussion between Stresau and WDNR, the activities described in this report were implemented.

## 3 Geology and Hydrogeology

### 3.1 Topography

The Spooner area is within the geographical province of the central plain, with the northern highlands geographical province located just to the north. The central plain geographical province is generally characterized as having limited topography with occasional hills, and is typically underlain by sandstone bedrock (Martin, 1965). The elevation at and around the site is approximately 1030 feet above mean sea level (MSL) (USGS, 1982). Site topography is relatively flat, with stormwater generally draining toward the east-northeast (toward Dunn Lake). Figure 1 is a portion of the USGS topographic map of the site vicinity.

### 3.2 Soils

Soils in the vicinity of the site are typically sand and gravels of pitted outwash deposits. Thickness of unconsolidated deposits in the vicinity of the site generally ranges from 50 to 150 feet (Young, 1973). Granular soils were generally present in subsurface investigation locations to a maximum depth of 44 feet below ground surface (maximum depth penetrated during the site investigation).

### 3.3 Geology

The bedrock geology of the Spooner vicinity consists of undifferentiated Cambrian aged sandstone sedimentary rocks (Ostrom, 1981). The sandstones are sometimes interbedded with layers of dolomite and shale. The Cambrian sandstone is underlain by a Precambrian basement complex. Bedrock was not encountered during the site investigation.

### 3.4 Hydrogeology

Groundwater availability in the vicinity of the City of Spooner is provided predominantly from either the unconsolidated pitted outwash deposits or the underlying sandstone bedrock located in the vicinity of the site (Young, 1973). Regionally groundwater flow is generally to the east (Young, 1973). Locally, groundwater flow direction is often influenced by topography and by local drainage and surface water bodies. Depth to groundwater in the existing and new site monitoring wells ranged from approximately 12 to 39 feet below ground surface during this phase of site investigation. The direction of shallow groundwater flow at the site is generally to the east-northeast (towards Dunn Lake) at a hydraulic gradient of approximately 0.001 ft./ft. based on the averages of historic monitoring data. Groundwater elevation maps are provided in Figure 5, "Groundwater Elevation Map North," and on Figure 6, "Groundwater Elevation Map South."

## 4 Site Investigation

The site investigation was performed by SEH from November to December 2020. Three monitoring wells and twelve hand auger borings were installed/Performed during the investigation. One round of groundwater samples from new and existing monitoring wells, along with 18 soil samples and eight septic sludge/liquid/composite samples were collected and analyzed for parameters of concern. Several duplicate samples were also collected and analyzed for quality control purposes. Water samples were also collected and analyzed from three existing on-site water supply wells. Site investigation activities were conducted in general accordance

with the approved work plan and Site Health and Safety plan as documented in the following subsections.

## 4.1 Septic Tanks and Drain Fields

Three septic tanks and associated drain fields are located at the Stresau facility. The contents of each septic tank were sampled for laboratory analysis using a new Trucore® eight-foot sludge core sampler consisting of a clean polyethylene barrel, a stopper, and an extension. Samples of sludge, liquid, and composite sludge and liquid were collected from two of the three septic tanks. Only a sludge sample was collected from the Building 1 septic tank because no liquid was present in this tank. A liquid sample was collected from a nearby lift station associated with the Building 1 system. No surficial film layer was present in any of the three septic tanks at the time of sampling, so no film layer samples were collected.

Three monitoring wells were installed adjacent to and downgradient of the three septic tank drain field systems to assess potential impacts at these locations. Soil samples were collected continuously from the three deeper borings using Standard Penetration Test (SPT) methodology, except in some deeper samples where a larger split spoon was required to facilitate sample recovery, and thus blow counts were not recorded. Representative portions of each soil sample were screened in the field for relative concentrations of VOCs using a photoionization detector (PID) and head space methods. Representative portions of each soil sample were also collected for potential laboratory analysis. Soils were classified in the field in accordance with the Unified Soil Classification System (USCS). Soil boring logs (WDNR Form 4400-122) were prepared for each boring, and include the lithologic descriptions, PID readings, SPT blow counts, and observations.

Groundwater monitoring wells were subsequently installed in the boreholes following drilling and soil sampling. The wells were constructed in accordance with NR 141, Wis. Adm. Code criteria, with ten-foot-long slotted screens positioned to intersect the groundwater table. Well construction details (WDNR Form 4400-113A) were prepared for each well. Following construction, the new monitoring wells were developed in accordance with NR 141 criteria using a Waterra pump. Monitoring well development forms (WDNR Form 4400-113B) were prepared for each new monitoring well. Soil boring logs, well construction forms, monitoring well development forms, and a revised well information form are provided in Appendix A, "Boring and Well Documentation". Two soil samples were selected from each boring for laboratory analysis.

Two hand auger borings were performed in the shallow soils within the drain fields at the site. One planned hand auger boring could not be completed due to subsurface obstructions. The hand auger borings were extended to five feet below ground surface, with soil samples collected from two to five feet below ground surface for laboratory analysis.

Following the development of the new monitoring wells, a round of groundwater samples was collected from site wells for analysis (including the TTU wells). The groundwater samples along with the above referenced septic tank samples and soil samples were placed in laboratory clean analytical bottles, labeled, and placed in ice filled coolers. The coolers were then sealed and hand delivered to the Federal Express office in Eau Claire, Wisconsin for delivery to the Eurofins laboratory in University Park, Illinois (Wisconsin Laboratory ID #998044300) using priority overnight delivery service. Standard chain of custody documentation was maintained during sample collection, processing, transport, and delivery.

## 4.2 Thermal Treatment Unit

Ten shallow hand auger borings were performed around the perimeter of the TTU to assess potential shallow soil impacts potentially resulting from operating the TTU system. Eight of the soil borings were configured in two concentric approximate ovals, and two additional boring locations (TTU-3 and TTU-7) were selected using a grid system and a random number generator to avoid sample bias. The inner and outer ring of samples were intended to better define the degree and extent if impacts were identified at the TTU.

The hand auger borings were performed using a decontaminated stainless-steel bucket-style hand auger with hand auger borings advanced to two feet below ground surface at each location. The hand auger boring locations were configured in two concentric ovals centered on the TTU as depicted in Figure 4. Representative soil samples were collected and preserved from each hand auger location for potential laboratory analysis. Surface soil samples were collected from an approximately six-inch by six-inch square area of soil just below the vegetation cover and to a depth to allow adequate soil sample volume collection (generally from 0 to 4 inches below ground surface) for laboratory analysis. The non-metals samples were placed directly into sample containers without agitation or homogenization. Metals samples were homogenized prior to placement in sample bottles. All the shallow soil samples collected in the proximity of the TTU were discrete samples. Sample collection, processing, delivery, and shipment were conducted consistent with the methods described above.

## 4.3 Water Supply Wells

One round of groundwater samples was collected from the three on site water supply wells during this site investigation. The water samples were collected from a faucet connected to each well, and before any water softening device or other water treatment system. The water was allowed to flow for several minutes at each location prior to sample collection. The samples were then placed directly into laboratory clean bottles and preserved and handled as described above.

## 4.4 Site Survey

The locations and elevations of the new site monitoring wells were surveyed by SEH along with the soil boring locations. The elevation of the surface of Dunn Lake was also surveyed at this time (late November) and used in developing the water table elevation contours from the November 30, 2020 sampling event.

# 5 Site Investigation Results

The results of SEH's site investigation are summarized in the following subsections.

## 5.1 Geology and Hydrogeology

The soils encountered during the subsurface investigation consisted largely of poorly graded fine to medium grained (SP) sands with varying amounts of gravel. The SP sands were relatively uniform in each boring location; thus, no geologic cross section has been prepared for this report. Bedrock was not encountered in any of the borings performed at the site during this investigation. PID headspace readings recorded on soil samples during the subsurface investigation were generally at or near background concentrations. No visual or olfactory evidence of soils contamination was noted by SEH personnel during performance of subsurface investigation activities.

Groundwater was encountered at depths ranging from approximately 12 to 39 feet below ground surface in the three newly installed monitoring wells in the proximity of the septic drain fields. The groundwater elevations from the three new wells along with the existing wells associated with the TTU and the surface water elevation of Dunn Lake were used to assess groundwater flow patterns. As depicted in Figures 5 and 6, groundwater at the site generally flows to the east-northeast at a horizontal hydraulic gradient of 0.001 ft/ft. In situ hydraulic conductivity of saturated site soils were not determined; however, using a published range of hydraulic conductivity values for relatively fine, poorly graded sands (Freeze, 1979), and a horizontal hydraulic gradient of 0.001 ft/ft, an average linear velocity (Fetter, 1992) of groundwater at the site is estimated to be between 3 and 35 feet per year (moving downgradient). No sheening, staining, or other visual or olfactory evidence of potential groundwater contamination was noted by SEH during well installation, development, and groundwater sampling.

Soils encountered during the SI consisted of fairly uniform granular soils originating from glacial pitted outwash deposits. Hydraulic conductivities of these soils are expected to be fairly high. Thus, backfill of utility trenches, if any, is not expected to be a preferential route for contaminant migration, if any. No other preferential contamination migration pathways were identified during the SI.

## 5.2 Septic Tanks and Drain Fields

There are three septic tank systems on the site, building 1 system is the largest system with the tank located near the main roadway and the drain field fed by a lift station pumping waste to the south drain field. The building 2 tank is located north of this and feeds a drain field to the east. The building 10 tank is also to the north and feeds a drain field to the northeast. One new monitoring well was installed generally to the east (down gradient) of each drain field. One hand auger boring was attempted at each drain field (one was obstructed and could not be completed). The locations of the septic system monitoring wells and hand auger borings are provided in Figure 3. The following subsections describe the investigative results of activities conducted associated with the septic tank systems.

### 5.2.1 Soils

Eight soil samples were collected from either the monitoring well borings or the hand auger borings associated with the septic tank systems and submitted to Eurofins for laboratory analysis. Parameters analyzed included VOCs, PAHs, total RCRA metals, perchlorate, and/or explosives. The analytical results are summarized on Table 1, "Soils Analytical Results, Septic Tank Systems." The complete analytical packages are provided in Appendix B, "Laboratory Analytical Packages."

As indicated in Table 1, parameters detected in soil samples collected from near the septic tank drain fields included perchlorate, arsenic, barium, cadmium, chromium, lead, mercury, and silver. No VOCs, PAHs, or \_\_\_\_\_ were identified in any of the soil samples analyzed from the vicinity of the three septic systems. Comparisons of those detects to the regulatory standards are described in Section 6.

### 5.2.2 Groundwater

A round of groundwater samples was collected by SEH on November 30, 2020, including the three new monitoring wells down gradient from the septic drain fields, as well as the existing monitoring wells associated with the TTU, and the three existing water supply wells for the site.

The groundwater samples from the septic system monitoring wells were analyzed for concentrations of VOCs, RCRA metals, and explosives. The groundwater analytical results for the septic system wells are provided in Table 2, "Groundwater Analytical Results, Drain Field Areas." The complete groundwater analytical package, including the septic system wells groundwater analytical results is provided in Appendix B.

As reflected in Table 2, analytes detected in the groundwater samples analyzed from the three septic system monitoring wells include arsenic, barium, mercury, No VOCs were detected in the groundwater samples collected from the septic system monitoring wells. Comparisons of those detects to the regulatory standards are described in Section 6.

## 5.2.3

### Septic Tank Contents

The contents of the septic tanks associated with buildings 2 and 10 consisted of a liquid layer in the upper portion of the tank with a semi-solid layer of waste below the liquid. No layer of free liquid was observed in the septic tank associated with Building 1, and the contents consisted entirely of semi-solid waste. No surficial layer of film or sheen was noted in any of the three septic tanks. Three waste samples consisting of a liquid sample, a semi-solid (sludge) sample, and a composite sample were collected from the Buildings 2 and 10 septic tanks for analysis. Only a semi-solid (sludge) sample along with a liquid sample collected from the nearby lift station were collected from the Building 1 septic system. The two composite samples were collected by sampling and homogenizing both the liquid layer and the semi-solid layer from Buildings 2 and 10. The samples were homogenized by softly mixing the samples in a clean stainless steel bowl. The homogenized sample was then placed in the appropriate laboratory bottles for analysis.

The waste samples were submitted to Eurofins laboratory for analysis of VOCs, PAHs, total RCRA metals, TCLP RCRA metals (sludge samples only), and explosives. The liquid and composite sample analytical results are summarized on Table 3, "Liquid and Composite Septic Tank Analytical Sample Results." The sludge sample results are provided in Table 4, "Sludge Septic Tank Analytical Results." A complete analytical package from the septic tank analysis is provided in Appendix B.

As presented in Table 3, detected analytes in liquid and composite samples included five VOCs, including benzene, 1,4-dichlorobenzene, ethylbenzene, p-isopropyltoluene, and toluene; all eight total RCRA metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver). No were detected in the liquid or composite samples. As shown on Table 4, the analytes detected in the sludge samples included benzene, 1,4-dichlorobenzene, p-isopropyltoluene, toluene, total barium, total cadmium, total chromium, total lead, total silver, total mercury, TCLP lead, and No PAHs were detected above their respective laboratory detection limits in the samples analyzed from the three septic tanks or the associated lift station from the Building 1 septic system. Comparisons of those detects to the regulatory standards are described in Section 6.

## 5.2.4

### Vapor Intrusion Pathway

Buildings 1 and 8 are in the general proximity of the site septic systems are the only structures on site with basements. Both basements consist of concrete floors and concrete block walls and are generally used for storage. Analytical data collected from groundwater samples in the proximity of the site septic systems were used to perform a vapor intrusion screening assessment for potential vapor intrusion into these two buildings. The vapor intrusion screening assessment was

performed in general accordance with existing WDNR criteria for investigation of vapor intrusion (WDNR, 2018). The screening assessment was performed using the USEPA's Vapor Intrusion Screening Level Calculator. No VOCs were detected in the groundwater samples collected from the septic system area. Based on the screening assessment results, the only parameter detected in the septic area groundwater samples that is listed as volatile in the Screening Level Calculator is mercury. When utilizing the highest groundwater detection for mercury in septic area groundwater samples, no carcinogenic risk was identified, and the target hazard quotient for non-carcinogens was not exceeded for the vapor intrusion pathway. Thus, no additional vapor intrusion investigation was performed or is warranted based on the site analytical results.

## 5.3

### Thermal Treatment Unit

Four existing wells (three in the proximity of the TTU and one upgradient well) have been historically utilized to monitor groundwater conditions proximal to the TTU. A total of ten shallow hand auger borings were performed in two concentric circles centered on the TTU to assess potential shallow soil impacts related to the TTU operation. One round of groundwater samples was also collected from the existing TTU monitoring wells during this site investigation and analyzed for the same purpose. The locations of the TTU monitoring wells and hand auger borings are provided in Figure 4. The following subsections describe the investigative results of activities conducted associated with the TTU.

#### 5.3.1

##### Soils

Ten soil samples (plus two duplicates) were analyzed from the shallow hand auger borings associated with the TTU. The soil samples selected for laboratory analysis were analyzed for concentrations of VOCs, PAHs, total RCRA metals,

The analytical results are summarized on Table 5, "Soil Analytical Results, TTU Area." The complete analytical package from the TTU soil analysis is provided in Appendix B.

The analytical results presented in Table 5 show detections for two PAHs (fluorene and phenanthrene), seven RCRA metals (arsenic, barium, cadmium, chromium, lead, mercury, and silver), analyzed. No VOCs were detected in the soil samples analyzed from the TTU area. Comparisons of those detects to the regulatory standards are described in Section 6.

#### 5.3.2

##### Groundwater

One round of groundwater samples was collected (including one duplicate sample) from the four existing monitoring wells utilized for monitoring the TTU area groundwater conditions. The groundwater samples were analyzed for concentrations of VOCs, PAHs, total dissolved RCRA metals, explosives, and perchlorate. The analytical results are summarized on Table 6, "Groundwater Analytical Results, TTU Area." The complete analytical package is included in Appendix B.

Table 6 indicates detections for arsenic, barium, chromium, in one or more groundwater samples. No VOCs or PAHs were detected in this round of groundwater samples collected from the TTU area. Comparisons of those detects to the regulatory standards are described in Section 6.

## 5.4 Water Supply Wells

Three on site water supply wells were sampled during this phase of site investigation. Two existing well logs indicate the wells were installed from 53 to 58 feet below ground surface in brown sand and gravel soils. Four-foot-long stainless-steel screens were installed in each of these wells. The existing water supply wells are near Buildings 1, 2, and 10 respectively at the Stresau facility. Documentation of proper abandonment of two historic water supply wells formerly located at the facility has been previously provided to WDNR.

The water supply well samples were analyzed for concentrations of VOCs, PAHs, total RCRA metals (unfiltered), and explosives. The results are summarized in Table 7, "Potable Wells Analytical Data, Site Water Wells." The analytical package is included in Appendix B.

The detected parameters listed on Table 7 include arsenic, barium, lead, No VOCs or PAHs were detected in the water supply well samples. Comparisons of those detects to the regulatory standards are described in Section 6.

## 6 Comparison to Regulatory Standards

### 6.1 Regulatory Criteria

The soils analytical results from the SI were compared to industrial and non-industrial Residual Contaminant Levels (RCLs). Background Threshold Values (BT<sub>V</sub>) established by WDNR for some naturally occurring parameters were also used to assess the analytical results. It should be noted that RCLs have not been established for some parameters detected in site soils (i.e., phenanthrene, chromium). Thus, these parameters were not compared to an existing regulatory standard.

Groundwater samples collected during the SI were compared to the Preventative Action Limits (PALs) and the Enforcement Standards (ESs) published in ch. NR 140, Wis. Adm. Code. Parameters detected in groundwater samples analyzed during the SI, but for which no PAL or ES has been established include The concentrations detected in groundwater samples for these two parameters were not compared to a groundwater regulatory criterion.

Potable water sample results from the samples analyzed from the three on site potable wells were compared to Maximum Contaminant Levels (MCLs and Maximum Contaminant Level Goals (MCLGs)) established by the USEPA for regulation of potable water impacts. Of these, only MCLs are enforceable, and MCLGs are a goal to attempt to achieve. Parameters detected for which no MCLs have been established include These parameters were not compared to an existing potable water standard.

The septic tank samples, which include samples of liquid, sludge, and composite were not compared to an existing regulatory standard, except toxicity characteristic leaching procedure (TCLP) samples were analyzed on each of the three sludge samples to assess if these samples were potentially characteristic hazardous wastes based on the results for eight metal parameters. The liquid and composite results table also includes ES and PAL values for various analytical parameters; however, these values are only provided for comparative purposes, and are not applicable to septic tank waste materials.

## 6.2 Septic Tanks and Drain Fields

The concentrations of parameters detected in soil samples collected from the septic tank drain field area were compared to their respective non-industrial and industrial RCLs, as well as existing BTVs established for some parameters. No existing RCL (industrial or non-industrial) or BTV exceedances were identified in any of the analytes detected in the soil samples collected from the septic drain field area.

The concentrations of parameters detected in groundwater samples were compared to existing PALs and ESs. No ES exceedances were identified in any groundwater samples analyzed from the proximity of the septic tank drain field systems. PALs for mercury were exceeded in the groundwater samples collected from wells MW-4S and MW-6S. No other PAL exceedances were identified in groundwater samples collected from the wells associated with the septic tank drain fields at the site.

The septic tank sludge was found to not be a characteristic hazardous waste for the eight RCRA metals based on TCLP analysis.

## 6.3 Thermal Treatment Unit

The analytical parameter concentrations detected in soil samples collected from the TTU area were compared to their respective industrial and non-industrial RCLs as well as their BTVs. One non-industrial RCL was exceeded for arsenic in sample TTU1, but that detect is below the BTV. No other non-industrial RCLs, industrial RCLs, or BTVs were exceeded for any of the parameters detected in the TTU area soil samples.

The groundwater sample results analyzed during this site investigation from the TTU area were compared to PALs and ESs for the parameters detected. No ES exceedances were identified for any of the parameters analyzed in the groundwater samples collected from the TTU area. The concentrations of perchlorate exceeded its respective PAL in each of the four TTU well samples and in one duplicate sample. No other PAL exceedances were identified during this round of groundwater sampling in the TTU area. Historical groundwater analytical data from approximately 15 years of groundwater monitoring at the TTU indicate current concentrations of parameters detected are similar to those detected historically. Many of the parameters detected are also historically detected in upgradient well MW-8, which could indicate naturally occurring and/or off-site source(s) of the detected parameters.

## 6.4 Water Supply Wells

No MCL exceedances were identified for any analyzed parameters in the three potable well samples analyzed from the site during this site investigation. The MCLG for arsenic and for lead was exceeded in all three potable well samples analyzed during the investigation (note, the goal for both parameters is 0 ug/L).

# 7 Conclusions and Recommendations

## 7.1 Geology and Hydrogeology

The soils encountered at the site consist of poorly graded fine to medium sands with varying percentages of gravel throughout the site. Little variation was noted in soils encountered at the site, and no preferential pathways for contaminant movement were identified on the site. With the

addition of three new monitoring wells, the direction of groundwater flow at the site has been confirmed to be in an east-northeasterly direction, towards Dunn Lake. Thus, MW-8 represents upgradient conditions, and should continue to be utilized as an up gradient well during future site groundwater monitoring.

## 7.2 Septic Tanks and Drain Fields

### 7.2.1 Soils

No regulatory criteria pertaining to soils contamination has been exceeded in the soil samples collected and analyzed from the septic tank drain field areas and no further soils investigation activities are recommended for this area.

### 7.2.2 Groundwater

PAL exceedances for mercury were identified in groundwater samples collected from two of the three monitoring wells installed to assess septic tank drain field groundwater conditions. No other exceedances of ESs or PALs were identified in the groundwater samples analyzed from these wells. SEH recommends continued groundwater monitoring of the three septic tank drain field monitoring wells.

### 7.2.3 Septic Tank Contents

Stresau is currently providing analytical data and working with potential disposal facilities to attain acceptance for disposal of the current septic tank contents. In addition, Stresau has ceased the disposal of mop water from the facility into the septic tank systems. Mop water is no longer disposed of down the drain to the septic system, so mop water will no longer be a source of potential contamination at the facility.

### 7.2.4 Vapor Intrusion Pathway

A vapor intrusion screening level assessment was performed by SEH addressing the potential for vapor intrusion into the basement of two site buildings. Based on this assessment, vapor intrusion is not a pathway of concern at the site, and no additional vapor intrusion investigation is warranted at this time.

## 7.3 Thermal Treatment Unit

### 7.3.1 Soils

One non-industrial RCL was exceeded for arsenic in soil samples analyzed during this site investigation and associated with the TTU. No industrial RCLs or BTVs were exceeded in the TTU soil samples. Since the Stresau facility is an industrial site, industrial RCLs should be applied to soil analytical results, and thus, no soils remediation or further investigation of soils in the proximity of the TTU appears warranted at this time. The only \_\_\_\_\_ was only detected on the inner ring of soil samples, indicating the outer ring provides a complete definition of degree and extent of energetics detections at the TTU. The PAHs detected were only found at sample TTU-3, which was a randomly located sample near the inner ring. The outer ring of samples provides a complete definition of degree and extent of detections for PAH compounds. No discernable pattern of detections was noted in the remaining locations where various parameters were detected at very low concentrations in TTU soil samples. Many of the

parameters detected are naturally occurring, and the detections could be due to the naturally occurring presence of these substances.

### 7.3.2

### Groundwater

PAL exceedances for were identified in the groundwater samples from all five groundwater samples analyzed from the TTU (including one duplicate). No other PAL exceedances, and no ES exceedances have been identified in the TTU groundwater sample analytical data from this investigation. Based on these results, SEH recommends continued groundwater monitoring of the existing monitoring wells in the TTU area to assess potential future fluctuations in the concentrations of the PAL exceedances. It should be noted that can be a naturally occurring compound in groundwater, and perchlorate was detected in the upgradient well MW-8. It is possible the detections of in site groundwater samples are either in part or completely the result of naturally occurring concentrations of this compound.

### 7.3.3

### Water Supply Wells

No MCL exceedances were identified in the groundwater samples collected and analyzed from the three potable wells at the Stresau facility. Thus, continued use of these wells to provide potable water to the facility appears warranted. SEH recommends continued monitoring of the water supply wells on site to monitor potential future variations in concentrations of groundwater parameters in these wells.

## 8

## Summary

The SI has been conducted in general accordance with NR 716 requirements, and has addressed each of the original eight WDNR concerns for the site as follows

- Identify hazardous substances, past and present, used in the laboratory and work area that could potentially have been mixed in with mop or other water discharges to the three septic systems - *These substances were identified during work plan preparation. Soil, groundwater, and septic waste samples were analyzed to include potential contaminants.*
- Conduct a waste determination of the water and sludge in the three septic systems for hazardous substances related to the current and historic operations at the facility – *Liquid, sludge, and composite samples of septic tank contents were analyzed for the parameters in accordance with the approved Work Plan.*
- Provide a description of where, when, and how long the septic systems have been used for disposal of mop and other waters generated at the facility – *Stresau previously provided this information to WDNR under separate submittal.*
- Identify the company or companies historically pumping the septic tanks and describe how often the septic tanks were/are pumped and identify the location(s) where the water was/is disposed or land spread – *Stresau previously provided this information to WDNR under separate submittal.*
- Conduct an evaluation of hazardous substances introduced and removed from the TTU, and any breakdown products from the operation of the TTU – *Stresau provided an extensive review of substances for which the TTU was used. Soil and groundwater*

*samples from the TTU area were analyzed for the parameters agreed upon in the approved Work Plan to address this concern. The degree and extent of contaminants related to energetics and PAHs near the TTU has been defined in shallow soils. Other compounds detected near the TTU are naturally occurring and their presence may or may not be related to the operation of the TTU.*

- Site investigation sample collection, testing, and analysis should include all hazardous substances/contaminants of concern identified through the waste determination process, and identification of past and present hazardous substances used during facility operations – *The hazardous substances historically used at the facility were identified during the preparation of the Work Plan and were included in the sampling of the various media at the facility.*
- Immediate or interim actions under Wis. Admin. Code ch. NR 708 may be necessary, especially relating to the septic system sludge based on results of assessment and investigation of the site – *It appears no immediate or interim actions are warranted based on the results of the SI.*
- Provide information regarding actions SLI has taken to prevent future hazardous substance discharges – *SLI has ceased its past mop water practices with the septic system and no mop water is discharged to any of the septic systems. Stresau continues to actively work with WDNR to assess additional possible modifications to operations of the septic system and TTU.*

The results of this site investigation indicate that low concentrations of several analytical parameters have been identified in site media including soils, groundwater, and septic waste. Some of the parameters analyzed (e.g., RCRA metals, ) are naturally occurring in Wisconsin soils and groundwater or can result from events such as forest fires. Some or all of the concentrations of these parameters identified in soil and groundwater samples could potentially be attributable to the naturally occurring background concentrations of these parameters and may or may not indicate a historic release of these parameters from the Stresau facility to the environment. Any ongoing impacts in the vicinity of the septic systems have been mitigated in the future because of changes Stresau has made to mop water disposal practices, i.e., no mop water enters the septic systems.

Regulatory exceedances identified during the investigation are limited to groundwater PAL exceedances for two parameters at one or more sampling locations, and to one non-industrial RCL exceedance for soil impacts, which does not apply to an industrial facility. One of the parameters exceeding its respective PAL (perchlorate) is naturally occurring and was found in upgradient well MW-8 at concentrations also exceeding the PAL for this compound. If ongoing regulatory requirements for the Stresau facility are to be consistent with those at other Wisconsin industrial facilities with similar degrees of environmental impact, it appears ongoing groundwater monitoring at the Stresau facility and the already implemented modifications to septic system inputs are appropriate.

## 9 Standard of Care

The site investigation was conducted in accordance with generally accepted professional practice and methods at this time and place. Other than that, no warranty is intended or implied.

**Use the Groundwater Monitoring Well and Point Information Form to record identification, location and construction information for groundwater monitoring wells and any other sample "points," (e.g., gas probes, lysimeters, leachate collection systems, etc.), that are part of the environmental monitoring program. NOTE: Not all fields will be applicable to all point types. Only one coordinate reference system may be used per site. Allowable coordinate systems are listed below. (Coordinates for each system require a minimum number of digits as described below.) Local grid coordinates cannot be accepted. Identify the Coordinate Reference System, Datum and Method used.**

Laboratory: Eurofins TestAmerica, Chicago

### Narrative

#### Job Narrative 500-191132-1

### Comments

No additional comments.

### Receipt

The samples were received on 11/14/2020 10:10 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 3.5° C, 4.0° C and 5.5° C.

### Receipt Exceptions

TTU-7 (2') (500-191132-16), TTU-8 (2') (500-191132-19) and TTU-10 (2') (500-191132-24) Container B for each sample appears to be affected by cooler water - do not use

### GC/MS VOA

Method 5035: sample vial has < 8 grams of soil in 10 ml of methanol. HB-1 2-5ft (500-191132-1), HB-2 2-5ft (500-191132-2), TTU-1 (500-191132-3), TTU-2 (500-191132-4), TTU-3 (500-191132-5), TTU-4 (500-191132-6), TTU-5 (500-191132-7), TTU-6 (500-191132-8), TTU-1 24' (500-191132-9), TTU-2 24' (500-191132-10), TTU-3 24' (500-191132-11), TTU-4 24' (500-191132-12), TTU-5 24' (500-191132-13), TTU-6 24' (500-191132-14), TTU-7 (500-191132-15), TTU-7 (2') (500-191132-16), TTU-8 (500-191132-17), TTU-8 (dup) (500-191132-18), TTU-8 (2') (500-191132-19), TTU-9 (500-191132-20), TTU-9 (dup) (500-191132-21), TTU-10 (500-191132-23) and TTU-10 (2') (500-191132-24)

Method 8260B: The laboratory control sample (LCS) for 573806 recovered outside control limits for Chloroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported. HB-1 2-5ft (500-191132-1), HB-2 2-5ft (500-191132-2), TTU-1 (500-191132-3), TTU-2 (500-191132-4), TTU-3 (500-191132-5), TTU-4 (500-191132-6), TTU-5 (500-191132-7), TTU-7 (500-191132-15), TTU-8 (500-191132-17), TTU-8 (dup) (500-191132-18), TTU-9 (500-191132-20), TTU-9 (dup) (500-191132-21), TTU-10 (500-191132-23) and MeOH Blank (500-191132-25)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Dioxin

Method 1613B: An Isotope Dilution Analyte (IDA) recovery associated with the following sample is below the method recommended limit: TTU-9 (500-191132-20). Generally, data quality is not considered affected if the IDA signal-to-noise ratio is greater than 10:1, which is achieved for all IDA in the sample(s).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### LCMS

Method 6860: The method blank for preparation batch 280-517528 and analytical batch 280-518062 contained Perchlorate above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed. HB-1 2-5ft (500-191132-1), HB-2 2-5ft (500-191132-2), TTU-1 (500-191132-3), TTU-3 (500-191132-5), TTU-5 (500-191132-7), TTU-6 (500-191132-8), TTU-8 (500-191132-17), TTU-8 (dup) (500-191132-18), TTU-9 (500-191132-20), TTU-9 (dup) (500-191132-21) and TTU-10 (500-191132-23) preparation batch 280-517528 and analytical batch 280-518062 Method: 6860

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Organic Prep

Methods 1668\_Sep\_2L, 3550C, 8290, HRMS-Sepf, HRMS-Sox, Split: The following samples went through Gel-Permeation Cleanup procedure, based on EPA method 3640A: TTU-1 (500-191132-3), TTU-2 (500-191132-4), TTU-3 (500-191132-5), TTU-4 (500-191132-6),

## Case Narrative

Client: Short Elliott Hendrickson, Inc. dba SEH  
Project/Site: Stresau Lab

Job ID: 500-191132-1

### Job ID: 500-191132-1 (Continued)

#### Laboratory: Eurofins TestAmerica, Chicago (Continued)

TTU-5 (500-191132-7), TTU-6 (500-191132-8), TTU-7 (500-191132-15), TTU-8 (500-191132-17), TTU-8 (dup) (500-191132-18), TTU-9 (500-191132-20), TTU-9 (dup) (500-191132-21) and TTU-10 (500-191132-23)

Method Prep/Air Dry: Sample contained significant amount of free liquid. TTU-1 (500-191132-3), TTU-9 (500-191132-20) and TTU-9 (dup) (500-191132-21) In preparation batch 280-517975 by Dry\_sample for 8330A.

Method Prep/Air Dry: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: HB-1 2-5ft (500-191132-1), HB-2 2-5ft (500-191132-2), TTU-1 (500-191132-3), TTU-2 (500-191132-4), TTU-3 (500-191132-5), TTU-4 (500-191132-6), TTU-5 (500-191132-7), TTU-6 (500-191132-8), TTU-7 (500-191132-15), TTU-8 (500-191132-17), TTU-8 (dup) (500-191132-18), TTU-9 (500-191132-20), TTU-9 (dup) (500-191132-21) and TTU-10 (500-191132-23). This material was removed and not extracted. The material removed is described in the aliquot spreadsheet. In preparation batch 280-517975 by dry\_sample for 8330A.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
X	Surrogate recovery exceeds control limits

### GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### LCMS

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Dioxin

Qualifier	Qualifier Description
*5	Isotope dilution analyte is outside acceptance limits.
B	Compound was found in the blank and sample.
I	Value is EMPC (estimated maximum possible concentration).
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
q	The reported result is the estimated maximum possible concentration of this analyte, quantitated using the theoretical ion ratio. The measured ion ratio does not meet qualitative identification criteria and indicates a possible interference.

### Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

### Abbreviation

These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent

### Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Accreditation/Certification Summary

Client: Short Elliott Hendrickson, Inc. dba SEH

Job ID: 500-191132-1

Project/Site: Stresau Lab

## Laboratory: Eurofins TestAmerica, Chicago

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Wisconsin	State	999580010	08-31-21

## Laboratory: Eurofins TestAmerica, Denver

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Wisconsin	State	999615430	08-31-21

## Laboratory: Eurofins TestAmerica, Knoxville

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Wisconsin	State	998044300	08-31-21

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

## Login Sample Receipt Checklist

Client: Short Elliott Hendrickson, Inc. dba SEH

Job Number: 500-191132-1

**Login Number:** 191132

**List Source:** Eurofins TestAmerica, Chicago

**List Number:** 1

**Creator:** James, Jeff A

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.5,3.5,4.4
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Client: Short Elliott Hendrickson, Inc. dba SEH

Project/Site: Stresau Lab

Job ID: 500-191135-1

## Job ID: 500-191135-1

Laboratory: Eurofins TestAmerica, Chicago

### Narrative

#### Job Narrative 500-191135-1

### Comments

No additional comments.

### Receipt

The samples were received on 11/14/2020 10:10 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.2° C.

### Receipt Exceptions

Received nitric preserved containers metals analysis and HCL voa vials for VOCs. Logged methods.

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. No time on COC, logged times per container labels.

One or more containers for the following sample(s) was received broken or leaking: Sample#5 "Bldg 1 Liquid" one HCL voa vial received broken

### GC/MS VOA

Method 8260B: The following samples were diluted to bring the concentration of target analytes within the calibration range: Bldg 1 Sludge (500-191135-4), Bldg 10 Liquid (500-191135-6), Bldg 10 Sludge (500-191135-7) and Bldg 10 Composite (500-191135-8). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### GC/MS Semi VOA

Method 8270D: The following sample required a dilution due to the nature of the sample matrix: Bldg 1 Sludge (500-191135-4). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270D: The following samples contained one base surrogate outside acceptance limits:Bldg 10 Sludge (500-191135-7). The laboratory's SOP allows one base surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

Method 8270D: The following samples were diluted due to the nature of the sample matrix: Bldg 2 Liquid (500-191135-1), Bldg 2 Composite (500-191135-3), Bldg 1 Sludge (500-191135-4), Bldg 1 Liquid (500-191135-5), Bldg 10 Liquid (500-191135-6), Bldg 10 Sludge (500-191135-7) and Bldg 10 Composite (500-191135-8). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### LCMS

Method 8330A: Surrogate recovery for the following samples were outside control limits: Bldg 2 Liquid (500-191135-1), Bldg 2 Composite (500-191135-3), Bldg 1 Liquid (500-191135-5), Bldg 10 Liquid (500-191135-6) and Bldg 10 Composite (500-191135-8). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

Method 8330A: Surrogate recovery for the following samples were outside control limits: Bldg 2 Sludge (500-191135-2), Bldg 1 Sludge (500-191135-4), Bldg 10 Sludge (500-191135-7), (500-191135-F-4-E MS) and (500-191135-F-4-F MSD). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed. preparation batch 280-517978 and 280-518262 and analytical batch 280-518936 8330

Method 8330A: The %RPD between the primary and confirmation column exceeded

for the following sample: Bldg 10 Sludge

# Case Narrative

Client: Short Elliott Hendrickson, Inc. dba SEH

Job ID: 500-191135-1

Project/Site: Stresau Lab

## Job ID: 500-191135-1 (Continued)

### Laboratory: Eurofins TestAmerica, Chicago (Continued)

(500-191135-7). The lower results have been quantified and reported. preparation batch 280-517978 and 280-518262 and analytical batch 280-518936 8330

Method 8330A: Due to matrix issues, analyte could have been incorrectly identified. Bldg 2 Sludge (500-191135-2), Bldg 1 Sludge (500-191135-4), Bldg 10 Sludge (500-191135-7), (500-191135-F-4-E MS) and (500-191135-F-4-F MSD) preparation batch 280-517978 and 280-518262 and analytical batch 280-518936 8330

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### Organic Prep

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-517449. Method: 3535/8330A/8330B\_DOD5 Batch: 517449

Method 3535: An incorrect volume of surrogate spiking solution was inadvertently added the following samples: Bldg 2 Composite (500-191135-3), Bldg 10 Liquid (500-191135-6) and Bldg 10 Composite (500-191135-8). Percent recoveries are based on the amount spiked. Method: 3535/8330A Batch: 517449

Method 3535: The following samples were received outside of holding time due to a shipping delay from weekend arrivals: Bldg 2 Liquid (500-191135-1), Bldg 2 Composite (500-191135-3), Bldg 1 Liquid (500-191135-5), Bldg 10 Liquid (500-191135-6) and Bldg 10 Composite (500-191135-8). Method: 3535/8330A Batch: 517449

Method Prep/Air Dry: Sample matrix is mostly water with suspended mud. Bldg 2 Sludge (500-191135-2), Bldg 1 Sludge (500-191135-4) and Bldg 10 Sludge (500-191135-7) In preparation batch 280-517978 by dry\_sample for 8330A.

Method Prep/Air Dry: Bldg 2 Sludge (500-191135-2), Bldg 1 Sludge (500-191135-4) and Bldg 10 Sludge (500-191135-7) In preparation batch 280-517978 by dry\_sample for 8330A.

Method Prep/Air Dry: Sample could not be disaggregated or sieved. The unsieved sample was used to create the aliquots for extraction. Bldg 2 Sludge (500-191135-2) In preparation batch 280-517978 by dry\_sample for 8330A.

Method Prep/Air Dry: A deviation from the Standard Operating Procedure (SOP) occurred. Details are as follows: An aliquot of the sample was created by tearing up portions of the dried sample using gloved hands to get the required 2-2.2g mass. Bldg 2 Sludge (500-191135-2) In preparation batch 280-517978 by dry\_sample for 8330A.

Method Prep/Air Dry: Samples are abnormally low density. Bldg 2 Sludge (500-191135-2), Bldg 1 Sludge (500-191135-4), Bldg 10 Sludge (500-191135-7), (500-191135-F-4 MS) and (500-191135-F-4 MSD) In preparation batch 280-517978 by dry\_sample for 8330A.

Method Prep/Air Dry: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: Bldg 1 Sludge (500-191135-4), Bldg 10 Sludge (500-191135-7), (500-191135-F-4 MS) and (500-191135-F-4 MSD). This material was removed and not extracted. The material removed is described in the aliquot spreadsheet. In preparation batch 280-517978 by dry\_sample for 8330A.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### GC/MS Semi VOA

Qualifier	Qualifier Description
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
X	Surrogate recovery exceeds control limits

### HPLC/IC

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
X	Surrogate recovery exceeds control limits

### Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

### Abbreviation

**These commonly used abbreviations may or may not be present in this report.**

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

### Glossary (Continued)

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

# Accreditation/Certification Summary

Client: Short Elliott Hendrickson, Inc. dba SEH

Job ID: 500-191135-1

Project/Site: Stresau Lab

## Laboratory: Eurofins TestAmerica, Chicago

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Wisconsin	State	999580010	08-31-21

## Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

## Login Sample Receipt Checklist

Client: Short Elliott Hendrickson, Inc. dba SEH

Job Number: 500-191135-1

**Login Number:** 191135

**List Source:** Eurofins TestAmerica, Chicago

**List Number:** 1

**Creator:** Hernandez, Stephanie

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	False	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	False	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

## Job ID: 500-191136-1

Laboratory: Eurofins TestAmerica, Chicago

### Narrative

#### Job Narrative 500-191136-1

### Comments

No additional comments.

### Receipt

The samples were received on 11/14/2020 10:10 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.8° C.

### Receipt Exceptions

MW-6S 4-6 ft (500-191136-3), MW-6S 10-12 ft (500-191136-4), MW-4S 2-4 ft (500-191136-5) and MW-4S 34-36 ft (500-191136-6) Container C for each of these samples appears to have water in them - do not use for analysis.

### GC/MS VOA

Method 5035: sample vial has < 8 grams of soil in 10 ml of methanol. MW-5S 4-6 ft (500-191136-1), MW-5S 12-14 ft (500-191136-2), MW-6S 4-6 ft (500-191136-3), MW-6S 10-12 ft (500-191136-4), MW-4S 2-4 ft (500-191136-5), MW-4S 34-36 ft (500-191136-6) and MW-4S 34-36 FT Duplicate (500-191136-7)

Method 8260B: The matrix spike duplicate (MSD) recoveries for 573633 was outside control limits for Chloroethane. Non-homogeneity is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8260B: The extraction blank for 573408 contained Methylene chloride above the method detection limit (MDL) and below the reporting limit (RL). The method blank associated with analytical batch 573633 has non-detect for Methylene chloride. Methylene chloride was non-detect in the associated samples; therefore, re-extraction and re-analysis of the samples were not performed: therefore the results were reported.

Method 8260B: The extraction LCS associated with preparation batch 573408 had recovery above control limits for Chloroethane. The instrument LCS associated with analytical batch 573633 had all analytes within control limits; therefore re-analysis was not performed. The data have been reported and qualified. MW-5S 4-6 ft (500-191136-1), MW-5S 12-14 ft (500-191136-2), MW-6S 4-6 ft (500-191136-3), MW-6S 10-12 ft (500-191136-4), MW-4S 2-4 ft (500-191136-5), MW-4S 34-36 ft (500-191136-6), MW-4S 34-36 FT Duplicate (500-191136-7) and (LCS 500-573408/22-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

### GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### LCMS

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

### Organic Prep

Method Prep/Air Dry: The following samples were air dried and sieved per the procedure; however, the samples contained material that would not pass through the sieve: MW-5S 4-6 ft (500-191136-1), MW-5S 12-14 ft (500-191136-2), MW-6S 4-6 ft (500-191136-3), MW-6S 10-12 ft (500-191136-4), MW-4S 2-4 ft (500-191136-5), MW-4S 34-36 ft (500-191136-6), (500-191136-C-2 MS) and (500-191136-C-2 MSD). This material was removed and not extracted. The material removed is described in the aliquot spreadsheet. In preparation batch 280-517975 by dry\_sample for 8330A.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Qualifiers

### GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD recovery exceeds control limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Project/Site: Stresau Labs

## Job ID: 500-191815-1

### Laboratory: Eurofins TestAmerica, Chicago

#### Narrative

#### Job Narrative 500-191815-1

#### Comments

No additional comments.

#### Revision

The report being provided is a revision of the original report sent on 12/17/2020. The report (revision 1) is being revised due to: Sample ID updated for Sample 6.

#### Receipt

The samples were received on 12/2/2020 10:55 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 0.9° C, 1.2° C and 2.8° C.

#### Receipt Exceptions

Received 1 500ml amber for explosives.broken for sample 1.

#### GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### GC/MS Semi VOA

Method 8270D: The following sample contained one base surrogate outside acceptance limits: (LCS 500-575080/2-A). The laboratory's SOP allows one base surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

Method 8270D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-575080 and analytical batch 500-575190 recovered outside control limits for the following analytes: 2-Methylnaphthalene, 1-Methylnaphthalene, Acenaphthene, Benzo[a]pyrene, Benzo[k]fluoranthene, Dibenz(a,h)anthracene and Naphthalene.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### LCMS

Method 6860: Internal standard (ISTD) response for the following sample was outside of acceptance limits: (CCVL 280-519621/33). The sample was not re-analyzed due to insufficient volume. analytical batch 280-519621 Method: 6860

Method 6860: Internal standard (ISTD) response for the following sample was outside of acceptance limits: (LCS 280-520504/45). The sample was not re-analyzed due to the internal standard recovery of the LCSD and other lab QC's are in control.  
(LCS 280-520504/45) 6860 analytical batch 280-520504

Method 8330A: Surrogate recovery for the following sample was outside control limits: MW-6S (500-191815-7). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed. preparation batch 280-519498 and analytical batch 280-519699  
8330

Method 8330A: Surrogate recovery for the following sample was outside control limits: MW-4S (500-191815-5). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed. Surrogate recovered within control limit in the primary instrument.

preparation batch 280-519498 and analytical batch 280-519844 8330

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### Field Service / Mobile Lab

## Case Narrative

Client: Short Elliott Hendrickson, Inc. dba SEH  
Project/Site: Stresau Labs

Job ID: 500-191815-1

### Job ID: 500-191815-1 (Continued)

#### Laboratory: Eurofins TestAmerica, Chicago (Continued)

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### Organic Prep

Method 3535: Due to the SOP requiring 500 mL of sample. The two 250 mL ambers were combined to ensure there would be no change with the reporting limits. MW-3 (500-191815-2), MW-2 (500-191815-3), MW-1 (500-191815-4), MW-5S (500-191815-6), MW-6S (500-191815-7), BD#1 (500-191815-8), BD#2 (500-191815-9), BD#10 (500-191815-10) and MW-5S (Dup) (500-191815-11) preparation batch 280-519498 Method-3535/8330A

Method 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-519498. A LCSD was run to ensure lab precision. preparation batch 280-519498 Method-3535/8330A

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

## Detection Summary

Client: Short Elliott Hendrickson, Inc. dba SEH  
 Project/Site: Stresau Labs

Job ID: 500-191815-1

### **Client Sample ID: MW-8**

### **Lab Sample ID: 500-191815-1**

## Qualifiers

### GC/MS Semi VOA

Qualifier	Qualifier Description
*1	LCS/LCSD RPD exceeds control limits.
S1-	Surrogate recovery exceeds control limits, low biased.

### HPLC/IC

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate recovery exceeds control limits

### LCMS

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

### Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

**List Number:** 1

**Creator:** Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.8,0.9,1.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	False	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
