Global Updates:  
[\(Schedule & Reported Emis\)](#)

Local intranet

The Update/Device process screen shows up when you click on the Update Device/Process link on the left side navigation.

Clicking the radio button for a device changes the process list.

Clicking on the 'Global Updates (Schedule & Reported Emis)' hyperlink allows you to update the hours/day, days/week, days/year, and quarterly schedule information for all processes that require this information. You may also add a pollutant for reported emissions for all emission emitting processes.

If your work is completed for a device or a process, you will see a green check mark in the done column located on the right side of the screen.
