ARS allows the user to calculate emissions after all of the data entry work is completed. The calculation procedure starts by clicking on the left side navigation 'Final Check/Submit Data' link. Clicking on the 'Calculator & Rollup Data' button brings you to the next screen.

ARS then calculates the emissions by pollutant at the process, device, and facility level after the 'Calculate' button is clicked.

The filter feature allows you to see emissions at each level. For example, leave the level at SRC (source) and click the ‘Apply Filter’ button.
