

**SUBJECT:** Preliminary report on harvest ratios during the second year of a trial elimination of the October 4-day antlerless deer season.

**FOR:** DECEMBER, 2007 BOARD MEETING

**TO BE PRESENTED BY:** Keith Warnke, Big Game Biologist

**SUMMARY:**

The 2006 deer season rule, WM-29-05, initiated trial hunting seasons with the requirement of harvesting specific ratios of antlerless to antlered deer utilizing a December antlerless only season that was favored by hunters. If minimum harvest ratios identified in Administrative Code are not met then the October hunt is reinstated.

Department staff will deliver a report based on preliminary deer harvest information.

If the average antlerless:antlered harvest ratio in 2006 and 2007 combined does not equal or exceed two antlerless deer per buck, then the four-day October antlerless deer gun hunt will return in 2008. Under this scenario, the start date would be the Thursday nearest October 15 and it would occur in DMUs where a regular season of buck plus quota will not bring the population to within 20% of the over-winter goal.

In 2006, the harvest ratio of 1.7 in 2006 was high enough to continue the trial season in 2007.

**RECOMMENDATION:** For information only.
