

Groundwater Management Area Recommendations
by the
Groundwater Advisory Committee:
Report to the Wisconsin Legislature
Pursuant to 2003 Act 310
December 31, 2006

Table of Contents

Executive Summary

Chapter 1: Introduction

Background
Legislative Charge

Chapter 2: Designated Groundwater Management Areas

2.1 Southeast GMA

2.1.a Background

Regional Hydrogeology and Other Water Sources

2.2 Northeast GMA

2.2.a Background

Regional Hydrogeology and Other Water Sources

2.3 Groundwater Management Plans

2.3.a Strategy (coordinated strategy for addressing groundwater management issues by affected local governmental units and regional planning commissions, role of DNR, role of other agencies)

- **Designated Groundwater Management Areas (GMAs) are required to have Groundwater Management Plans. (1)**
- **Groundwater management planning must integrate water use and system planning within land use planning. (4)**
- **Groundwater management planning needs to balance the need for local control of water use and land-use zoning with the lack of synchronization of water resource boundaries with political boundaries. (3)**
- **Groundwater management should balance human health, environmental, economic, and social benefits for the long term, using flexible and adaptive approaches. (10)**
- **The Groundwater Management Plan will manage all of the aquifers in the area concurrently to minimize ecological impact, to limit impacts on base flow of streams, and to sustain groundwater quality and quantity for future generations. (8)**

2.3.b Recommendations for Legislation

- **The requirements of a GMP will be established by Administrative Rule. (14)**
- **Different planning entities may do the planning in different parts of the state. (5)**

- The department will authorize a planning agency for each GMA. Those planning agencies will: (5a)
 - Be a regional planning commission or a representative organization that includes elected officials or their designees, having jurisdiction in the GMA. (5a i)
 - To the extent possible, be supported by resolutions from local government units. (5a ii)
 - Be technically capable to complete the plan in a timely manner. (5a iii)
- The department can withdraw or modify the authorization of a planning agency for cause with public input. (5b)
- If the department withdraws authorization of a planning agency, then it must authorize an alternative planning agency. (5c)

2.3.c Recommendations for Administrative Rules

- GMPs may be different in different areas but all GMPs must meet requirements set by the administrative rule. (14a)
- Best Management Practices that must be considered in the GMP will be identified in the administrative rule. (14c)
- The rule will identify the standard that is being managed to. (14d)
- The administrative rule will identify the type of information that must be reviewed and considered in the GMP. (14b)
- Groundwater management planning must recognize the need to promote local planning and regulation to protect: (9)
 - Important groundwater recharge areas (9a)
 - Existing and future well zone-of-contribution areas, and (9b)
 - Areas most susceptible to groundwater contamination. (9c)
- The GMP must include a monitoring component. (14e)
- The GMP must include a process for adaptive management. (14g)

2.3.d Other Recommendations for Implementation

2.4 Funding

Chapter 3: Other Areas Considered for Coordinated Management

3.1 Description of Other Areas Considered for Coordinated Management

3.1.a Central Sands Area

3.1.b Dane County

3.1.c St. Croix County

3.1.d Recommendations for Designation

3.2 Consideration of Future GMA Designation and Removal of Designation

•

-
-

3.3 Recommendations for Legislation for Other Areas

- The State should encourage coordinated groundwater management planning in order to avoid or reduce future groundwater problems. (2)
- To facilitate proactive planning and mitigation strategies, a process short of GMA-designation should be developed to identify areas that are likely to have future groundwater problems. (6)
- Areas designated as “other areas needing coordinated management” shall be eligible to receive funding to support research, pilot programs, management strategies and planning activities. (36)

3.4 Recommendations for Administrative Rules for Other Areas

- A process or mechanism needs to be created to determine when an area should be classified as a GMA or “other areas needing coordinated management” and also when it is appropriate to change the classification of an area. (37)
- Dane County and the Little Plover River Watershed shall each be designated as an “other area needing coordinated management”. (16 modified)

3.5 Funding

Chapter 4: Mitigation Program for Groundwater Management Areas

4.1 Background and Discussion

4.2 Recommendations for Legislation

4.3 Recommendations for Administrative Rules

4.4 Funding

Chapter 5: Other Recommendations

- The Legislature should provide a structure for renewable funding for the long-term operation and maintenance of groundwater level and surface water level monitoring and data management systems throughout the state. The monitoring effort should consist of two elements; a base level monitoring system that covers the state, and targeted monitoring systems in existing or potential GMAs that are designed to support the specific needs and management objectives of the area. The targeted monitoring programs should be designed with substantial support and guidance from the GMA or potential GMA. (15)

Chapter 6: Summary of Recommendations

6.1 Legislative Recommendations

6.2 Recommendations for Administrative Rules
