

Index to Files

To facilitate file search requests and open record requests related to the contested case hearing for the abandonment and removal of Nemahbin Roller Mill Dam in Waukesha County, the Department of Natural Resources has scanned the historical dam records for the dams. The scanned documents reflect the agency's record for the dam until approximately October 1, 2008. Records contained within these folders include;

Field File: This includes the notes and pictures from field visits, database information and some calculations done for inspections.

Correspondence File: Correspondence received and sent by the DNR or its predecessor agencies relating to the dam.

Feasibility Report: A report prepared by Mead & Hunt for the City of Delafield on the Feasibility of rehabilitating the Fish Hatchery and Nemahbin Roller Mill dams.

Dam Photos: Higher resolution scans of historic photos from the dam file and database. The first 5 numbers in the file name are a dam identifier, the next 6 are the 2 digit month, day and year, and the last two numbers are a sequential numbering of the photos from that day. An index to the photos has been included.
